Rob Bickel · Managed Software Services

The software your business runs on deserves an owner.

Managed services for the custom applications, integrations, and internal tools your company depends on: monitored, patched, documented, and improved. It's what a managed IT provider does for your network, applied to your applications.

The problem

The builder is gone

A contractor or employee built it and moved on. Nobody can safely change it.

No one is watching

No monitoring, untested backups, and outages discovered by customers.

Risk and cost you can't see

Scattered credentials, unpatched dependencies, and overlapping tools still billing.

How it works

01 · Assess

A fixed-scope Software Portfolio Audit (30–45 days) inventories every system, maps dependencies, and ranks risk and cost into a plan leadership can act on.

02 · Stabilize

We take custody of access and credentials, add monitoring and backups, write runbooks, apply critical patches, and retire what you don't need.

03 · Manage

Ongoing operation, maintenance, and improvement under your service agreement, with a quarterly portfolio review.

What's covered

Monitoring & response
Uptime and error alerts with a named engineer.

Patching & updates
Dependencies and runtimes kept current.

Security scanning
Secrets, vulnerable packages, risky config.

Backups & recovery
Verified backups, tested restores.

Documentation
Runbooks and system summaries kept current.

Changes & enhancements
Fixes and features under your scope of work.

Access & key custody
Credentials, domains, vendor accounts.

Quarterly reviews
Cost, risk, and what to consolidate next.

Who it's for

- Custom or legacy apps built by someone who has moved on
- No in-house engineering team, or one stretched too thin for maintenance
- Systems inherited through acquisitions or reorganizations
- Security questionnaires, audits, or insurance renewals coming up
- Leadership asking what happens if a system breaks or a person quits

What you get

- One accountable owner for your business software
- Visibility into status, risk, and cost in plain English
- Fewer systems, better maintained
- Documentation that belongs to your company
- No lock-in: your code, your infrastructure

COMMERCIAL TERMS

Built for how established companies buy

Enterprise service agreement

One master agreement covering terms, confidentiality, security, and IP. It's negotiated once, so new work starts without restarting legal review.

Flexible scopes of work

Each application, project, or service level gets its own statement of work. Add, change, or retire scopes as needs change.

An invoiceable relationship

Monthly invoices on standard terms, purchase-order friendly, with itemized reporting. Vendor onboarding and security reviews welcome.

Who you work with

Rob Bickel is a technologist and engineering leader with more than 20 years of experience building and operating production systems in fintech, SaaS, and high-growth startups. He has led global engineering teams and modernized enterprise platforms. Clients work with him directly, not through an account manager.
